The concept of the program must be harmonized

2. TABULAR DIARY
The program is intended primarily for users who want to have an overview of important activities, which are usually also somewhat structured
The data is organized in tabular form, which allows for great transparency.
An essential feature of the program is that it allows you to enter multi-line content in an individual field.
Therefore, we do not exaggerate if we claim that the program is a tabular stack of txt documents and a calendar.

Capturing data is easy, and the default editor is MS Notepad.
The program also structures the content of the field (txt document) if you follow a few simple rules when writing.
The rules are taken from our free program which is integrated here as a subroutine: http://www.txt-indent.info
We recommend that you take a look at the mentioned freeware program and the accompanying instructions.

The program generates a calendar for any year (greater than 2000) and adds it to the end of the table.
Including tasks in the calendar is easy, fast and transparent.
